How Health Care Performance Changed in Wyoming^b

- Indicators that Improved
- Indicators that Worsened
- Indicators with Little or No Change

How Wyoming Compares to All States

The Best and Worst in Wyoming

Top-Ranked Indicators

Days of high ICU stress during the COVID-19 pandemic

Children who are overweight or obese

Children who did not receive needed mental health care

Most Improved Indicators

Children without all recommended vaccines

Hospital 30-day mortality

Potentially avoidable emergency department visits ages 18–64

Bottom-Ranked Indicators

High out-of-pocket medical spending

Adults with all recommended cancer screenings

Suicide deaths

Indicators That Worsened the Most

Nursing home residents with an antipsychotic medication

Alcohol deaths

Central line-associated blood stream infection (CLABSI)

Notes

- (a) The 2022 Scorecard rankings generally reflect 2020 data. The 2022 Scorecard added or revised several performance measures, including the addition of seven measures specifically related to performance during the COVID-19 pandemic, since the September 2020 Scorecard report; rankings are not comparable between reports.
- (b) Trend data available for 45 of 56 total Scorecard indicators. Improved/worsened denotes a change of at least one-half (0.5) standard deviation larger than the indicator's distribution among all states over the two time points. No change denotes no change in rate or a change of less than one-half standard deviation.
- (c) All COVID-19 measures are current through the end of March 2022.
- (d) Rates are for states' low-income population, generally those whose household income is less than 200% of the federal poverty level (FPL).
- (e) Income disparity is the difference between the states' low-income and higher-income (generally 400%+ FPL) populations.
- (f) Improvement indicates that the low-income rate improved and the disparity between low- and higher-income populations narrowed; worsening indicates that the low-income rate worsened and the disparity between low- and higher-income populations widened.
- (g) Performance data not available for all groups in every state. While scores from the 2021 Equity Scorecard report are used for ranking states, certain data indicators presented in Table 4 may be more recent than those used in the 2021 report due to updates during the past six months. Certain cancer screening indicators in Table 4 are specific to the Equity Scorecard report.
- (h) States not ranked on health system performance for white people in this report; included for comparative purposes.
- “—” means data not available.
